scratchy throat	a stuffy nose	VOLLY	<i>y</i> omit	

a flue	food poisoning	hay fever

Task 5: Put these diseases to the right column.

tuberculosis measles	heart attack rheumatism		m					
chicken pox tonsilitis	cancer	hepatitis	AIDS					
german measles stroke	smallpox	polio asth	ıma					
pneumonia mumps	whooping cough	diab	etes					
appendicitis multiple sclero	osis tetanus	diphtheria	l					
contagious diseases	serious diseases							
Task 9: Complete the sentences with the correct word.								
I've got a terrible	•							
She her leg whe He has eyes.	n she fell over the suit	case.						
I've had a head sir	nce yesterday.							

She hit her arm against the wall and it really

When you have tonsilitis, you have athroat.

I've been working in the garden and now I've gotache.

The wasp stang her and it was veryful.

Task 10: Read and answer the questions.

Debra is a student at Oxford Polytechnic. A year ago she was extremely thin, got headaches, couldn't concentrate, forgot things. Her face was spotty; her stomach was almost always upset; she couldn't sleep. For a long time no one could help her. Her doctor used to give her sleeping pills, but each new kind only worked for a short while.

Then after talking to a friend with similar problems, Debra began to think she might be allergic to foods and chemials. She went to see a specialist. The specialist tested her and found out that she was allergic to things she ate, breathed and touched. Now Debra is much better. She takes medicine, but she also has to avoid some of the things that make her ill.

Things like chlorine in drinking water, fumes from cars and chemicals in food all hurt her. So she has to drink bottled water, use a special air filter, and avoid tinned or package food. Fortunately she shares a house with other women who understand her problem, and they share the cooking and shopping for her diet.

- 1) What was the matter with Debra a year ago?
- 2) What did her doctor give her? Did it work?
- 3) Who made Debra think she might have allergies?
- 4) What did the specialist find out?
- 5) What does Debra have to do now?
- 6) How does she feel now?
- 7) Do you have an allergy? What to?
- 8) Do you know anybody who suffres from an allergy?
- 9) What can people be allergic to?
- 10) What's the cure?

Vocabulary

ache bolest, bolet

appendicitis zánět slepého střeva

backache bolest zad cancer rakovina

chicken pox plané neštvice

cough kašel

diabetes cukrovka diarrhoea průjem diphtheria záškrt
